Home Rental Web Application - Project Documentation

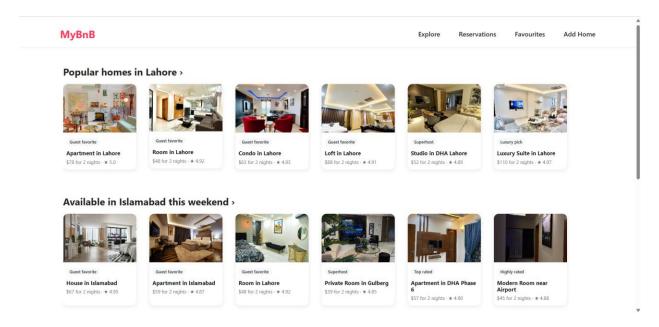

Introduction

This Node.js-based website is designed to provide a user-friendly interface for users to book homes for their stay. It includes features such as browsing listings, viewing property details, making reservations, adding to favorites, and managing bookings.

Interface Overview

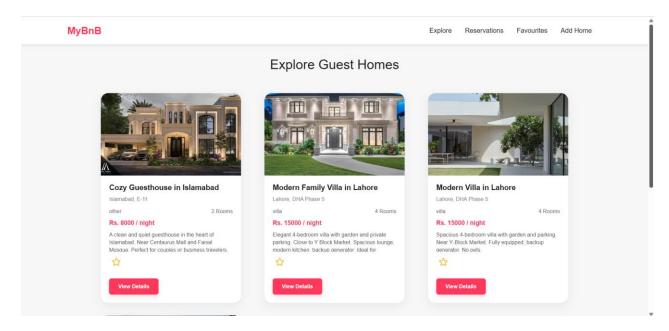

1 Home Page

The homepage displays a list of available homes. Each listing includes a 'View Details' button for more information.

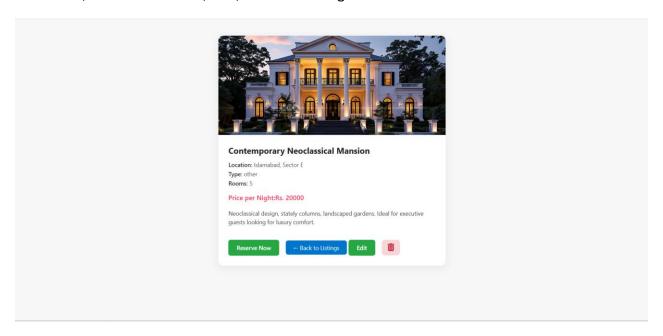

Q Explore Page

Clicking on the 'Explore' tab shows all available properties with titles, locations, and action buttons.

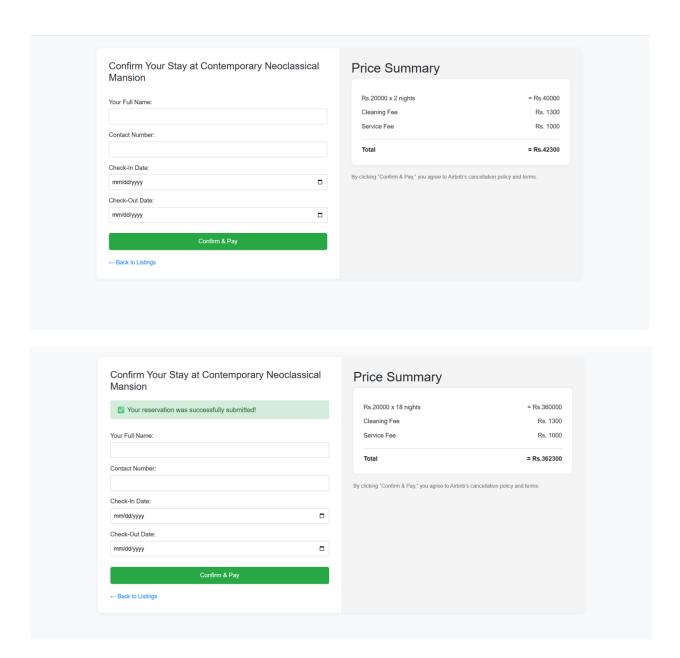

l View Details Page

From here, users can reserve, edit, or delete listings.

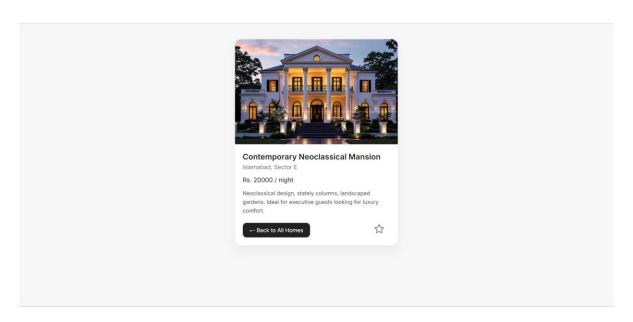

Reservation Flow

- 1. Click 'Reserve Now'
- 2. Fill in reservation details
- 3. Submit and see a success message confirming your booking.

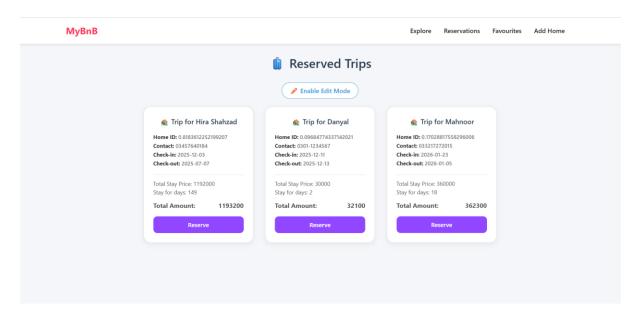

★ Favorites Feature

To add a property to favorites, click the star icon. To remove, click it again and confirm from the popup.

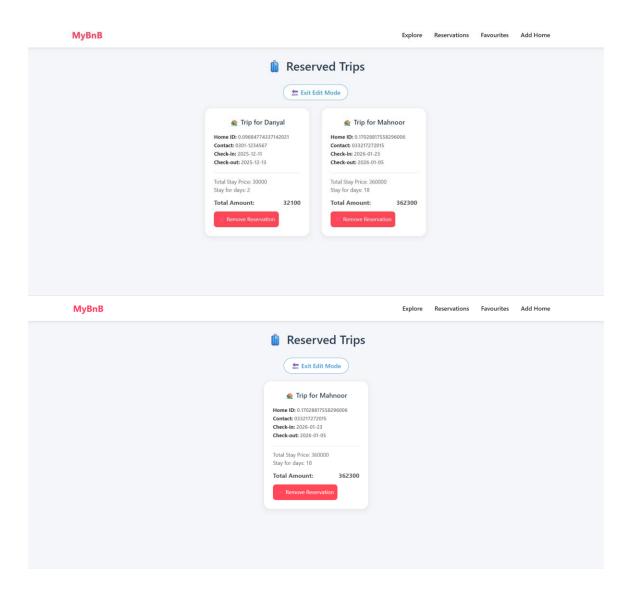

Wiew Reservations

Click on 'Reservations' in the navbar to view booked homes. To cancel a booking, enable edit mode and click 'Remove Reservation'.
